```
uname -a
Linux HOSTNAME-OMITTED 2.6.18-ovz028stab035.1-smp #1 SMP Sat Jun 9 12:09:51 MSD
2007 x86_64 x86_64 x86_64 GNU/Linux
```

```
rpm -qa |grep ovz
ovzkernel-2.6.18-8.1.4.el5.028stab035.1
ovzkernel-PAE-2.6.18-8.1.4.el5.028stab035.1
kernel-smp-2.6.18-ovz028stab035.1
```

I followed the instructions from the wiki and after finishing the instructions I found another set of work around instructions for dealing with x86_64. I did not compile them myself I used yum to fetch them from the openvz repository.

Thanks
