Hi Den:

I rebuilt Kirill's version with the patch. The kernel panic looks the same (at least to me), I have included it below. I did not see anything unusual in the /var/log/vzctl.log file, and the only important thing I saw in /var/log/messages was the following 2 messages:

```
kernel: nfs: server lss-nfsa09 not responding, still
trying
Jul 27 20:23:44 lss-host40 last message repeated 4 times
```

thanks,

Paul
