I'm not sure what exactly you are trying to do. If you have the pre-created template I would do this:

```
#cd /vz/private
#mkdir 101
#cp debian-3.1-i3 86-minimal.tar.gz 101/
#cd 101
#tar zxvf debian-3.1-i3 86-minimal.tar.gz
```

You should now have the minimal debian base layout inside 101

If you download the pre-created template you do not need to create you own debian template.

I'm not sure if Virtuozzo works the same as OpenVZ or if it uses /vz/private/101 for example.
Hope this helps
