Hello.

may be the following iptables rule (on a Hardware Node) can help you:

```
# iptables -t nat -A POSTROUTING -s $VE_SRC_PUBLIC_IP -d $PRIVATE_SUBNET -o eth0 -j  
SNAT --to $VE_SRC_PRIVATE_IP
```

i.g. if a VE with VE_PUBLIC_IP (say 85.86.87.88) ping a node with private IP (say 172.18.2.3),
the source address for the outgoing packets will be changed to \$VE_SRC_PRIVATE_IP (say
172.18.2.4).

Hope this helps.

Konstantin.
