First of all - which kernel do you use?
Next - which host OS and guest OS?
Do you have sysctl 'kernel.ve_allow_kthreads = 1' ?

Looks like now the problem is not connected with the network configuration but with the nfs configuration itself. Check Google - the error you receive appeares rather often.
Could you please check if appropriate services are running, in particular portmap, rcp.mountd, rpc.nfsd, rpc.statd.

If all this won't bring the result try to mount the same nfs partition on the Hardware Node.

Hope this helps.
