2) i still think that the problem with 2.6.18 kernels is in initrd.

I doubt the problem is initrd, since some kernels hung while trying to start the 9th VE.

There is the following collision:
If 2.6.18 kernel really tried to start any VEs -- you should have kernel booting messages in /var/log/messages file. However you said it didn't show anything about the new kernel.

I agree with Konstantin, IMHO the situation on your node looks like initrd troubles.

Thank you,
Vasily Averin
