Subject: Re: Running X server in VE
Posted by efball on Mon, 06 Aug 2007 20:17:46 GMT

I'm also running vncserver within a VE to get an xserver. I don't have gnome, kde, gdm, kdm, xdm, etc. I just start a fvwm session from the .vnc/xstartup file. The vncserver is started from /etc/sysconfig/vncserver. I'm using a RHEL 4 host with CentOS 4 VEs.
