Out of curiosity, why do you want to compile without modules so much?

Because it's a server. Some rootkits are using modules to hide process and files. But if module support is disabled, there isn't any possibility to use modules.

And: I need no module support on a server. It is an error coming from openvz, so it should be fixed.

What about that diffs mentioned in bug #52? Can I get them anywhere, so I can try them. Maybe I can help, fixing this bugs.

But I don't like to do work twice, so this is my main reason, why I'm wanting this diffs.

TIA,
Steffen
