I think given the short time that is left for doing travel etc.  
(considering it is long weekend here in USA) it will be tough to do this  
in person.

I will be interested in attending this on phone though (and will have  
couple more folks from Google join in).

Since Eric/Paul will be attending the KS and giving them an update, it  
will be very useful if we can all agree on some set of features that  
will be useful for containers and for which we need 1- input from folks  
in KS and 2- let them know that this is high on priority list.
