jonasb wrote on Thu, 09 August 2007 14:45 OK, so I don't use --netdev_add at all?

exactly, you should only assign non-used IP for your VE

jonasb wrote on Thu, 09 August 2007 14:45 It doesn't matter which IP-address I use I always got error messages that they are in use. I'm really sure that I don't use them anywhere else.

Hmm, it looks strange. you need to understand where is interface with MAC addresses

00:00:0c:07:ac:01 and 00:1a:6d:02:43:45

Could you show "arp -an" output on HW node?

Or probably you can send me access credential via PM -- I'll try to investigate this issue on your node.

Thank you,
Vasily Averin
