Hi friends.

I have a new problem .

Now I try to make a nfs for my debian svr.

What did i install?
nfs-common
portmap
nfs-user-server

Whatat did i do?
edit /etc/exports
    /nfs_pub 172.16.3.51/255.255.255.0(rw)

then i restarted the service. /etc/init.d/nfs-user-server

the result of rpcinfo -p was this.
```
program vers proto   port
   100000   2   tcp    111  portmapper
   100000   2   udp    111  portmapper
   100003   2   udp   2049  nfs
   100003   2   tcp   2049  nfs
   100005   1   udp    735  mountd
   100005   2   udp    735  mountd
   100005   1   tcp    738  mountd
   100005   2   tcp    738  mountd
   100024   1   udp    762  status
   100024   1   tcp    765  status
```

Then when i try to mount on the client i get this error.
vps-cliente:/mnt# mount -t nfs 172.16.3.57:/nfs_pub/ /mnt/nfs
mount: 172.16.3.57:/nfs_pub/ failed, reason given by server: Permission denied

¿any solution?
