I didn't ask if your hn and vps were on the same machine... I asked if they were on the same network... and when I say network... I don't mean "a bunch of computers connected together"... I mean on the same IP network where they will talk to each other.

It appears they are.

Please show the output of the following from the hardware node:

`service iptables status`

`cat /vz/private/101/etc/resolv.conf`
