Though, as sad by Vasily, some details are needed. There is no useful information in your request.

1. could you provide your /etc/exports on the server side and information what server you are using
2. Plz provide
   cat /proc/mounts on both VEs
3. Could you provide more detailed how you change files and verifies that the change have taken place? Simple
   echo aaa > file
and subsequent content file verification does not have the problem you report

Regards,
  Den
