Hello friends.

I am attempting to use the iptables log target in the VE.

```
[root@arsenic ~]# lsmod | grep -i log
ipt_LOG          7712  56
ip_tables        23472  16
ipt_recent,ipt_REDIRECT,iptable_nat,ipt_state,ipt_length,ipt_ttl,ipt_tcpmss,ipt_TCPMSS,iptable_
mangle,iptable_filter,ipt_multiport,ipt_limit,ipt_LOG,ipt_TOS,ipt_tos,ipt_REJECT
[root@arsenic ~]#
```

```
[root@arsenic ~]# vzctl enter 9890933
entered into VE 9890933
[root@dark /]#
```

```
[root@dark /]# grep LOG /proc/net/ip_tables_targets
LOG
```

When I create a simple logging rule such as: '-A INPUT -p tcp --dport 22 -j LOG', no messages seem to be hitting syslog. I tested this with a Centos4 VE.

Am I missing something here or is the log target unsupported in the VE context? If so, I will create a bugzilla report.

Thank you
Rick
