generico wrote on Tue, 14 August 2007 05:33thx for the reply, but this tip didnt fix my problem.

My temporal solution is:

```
rpc.nfsd -r  
rpc.mountd -r  
portmap
```

sorry

This is my temporal solution, running this commands, i can mount the NFS directory.

But now i have a "new" problem. When I try to mount "/home" in NFS. I can't login in my NXserver.

Server1 -> openLDAP + NFS (openvz)

Server2 -> NXSERVER (xen "i cant run an nxserver on openvz yet") here i mount /home in NFS )

ClientX -> connect to NXserver with users in ldap and /home in NFS.
