Subject: Re: OpenVZ on CentOS 5 network issues
Posted by dowdle on Fri, 17 Aug 2007 00:02:05 GMT

I'm glad we got the problem figured out and that it is working now.

Regarding the potential need for language in the documentation that mentions... do not preconfigure your hardware node with all of your IPs... I'm not sure that is needed. The reason I say that, is if it was needed it should be mentioned.

I mean... it is easier to mention the things you need to do... than it is to mention all of the things you don't need to do... if you know what I mean.

Please let us know if you have any more problems.
