thanks Scott. what i am thinking is the memory config sent me so deep into the config that it is not a bad thing for my learning.

i split the server 24 ways, then manually edited these lines in the config to set the VE limits at 256MB:

```
VMGUARPAGES="65536:2147483647"  
OOMGUARPAGES="65536:2147483647"  
PRIVVMPAGES="65536:75536"  
SHMPAGES="6553:6553"
```

mainly all guess work from studying the patterns in the numbers

this is the whole config when done for 256MB
