Everyone has the same CPUUNITS/CPULIMIY so as I understand it everything should be equal.
Just going to an extreme though

```
[root@vz26uk ~]# vzctl set 881980 --cpulimit 10000 --cpuunits 480082
```

```
Setting CPU limit: 10000
```

```
Setting CPU units: 480082
```

```
Configure meminfo: 262144
```

```
WARNING: Settings were not saved and will be resetted to original values on next start (use  
--save flag)
```

```
[root@vz26uk ~]# vzctl exec 881980 "time perl -e 'sqrt(100) for (0..1000000)'"
```

```
real  0m2.971s
```

```
user   0m2.934s
```

```
sys    0m0.034s
```

No change (BTW this node is running hypervm so those limits are set via that but I take what you are saying.) Its just this one VPS out of 700 or so that is playing up which I'm finding weird all with very similar settings
