Hi all,

I installing a new openvz on debian etch via this document [1].

I create a new virtual machine this [1] configurations.

Ok, my vps running normally because i'm try to installing VHCS CP. I have got any error when installation time but i can see not running bind dns server. I try to starting manually (/etc/init.d/bind9 start) but i get

Starting domain name service...: bind/etc/init.d/bind9: line 24:

/bin/mkdir: Cannot allocate memory

/etc/init.d/bind9: line 25: /bin/chmod: Cannot allocate memory

/etc/init.d/bind9: line 26: /dev/null: Too many open files in system

/etc/init.d/bind9: fork: Cannot allocate memory

errors. /bin/mkdir is running normally. (mkdir /root/test, ok)

Same problem for proftpd,

/etc/init.d/proftpd: line 13: /bin/grep: Cannot allocate memory

/etc/init.d/proftpd: fork: Cannot allocate memory

Starting ftp server: proftpd/etc/init.d/proftpd: line 94:

/sbin/start-stop-daemon: Cannot allocate memory

failed!

Why i get this erros.

And How can I limited inbound and outbound network traffic per vps?

Thanks all.

uname -a : Linux vps01 2.6.18-openvz-12-1etch1-686 #1 SMP Sat May 5 00:26:59 CEST 2007
i686 GNU/Linux
