Hello,
I'm getting this:

```
....  
LD [M] lib/zlib_deflate/zlib_deflate.o  
Building modules, stage 2.

make[1]: *** [modules] Error 2  
make[1]: Leaving directory `/home/eyck/40f-ovz/work/openvz-test'  
make: *** [debian/stamp-build-kernel] Error 2
```

when I try to build openvz-enabled kernel. I'm using 2.6.18 /pristine/
(it looks like ovz028stab039.1 already includes 2.6.18->2.6.18.8 patches,
and one needs to dig out older 2.6.18 to make this patch apply).

is this normal?
