Have CentOS 5 (x86_64), latest OpenVZ kernel and tools, VPS based on centos-4-x86_64-minimal template.

Trying to set iptables modules to vps:

Quote: `vzctl set 200 --iptables "iptables_filter iptable_mangle ipt_limit ipt_multiport ipt_tos ipt_TOS ipt_REJECT ipt_TCPMSS ipt_tcpmss ipt_ttl ipt_LOG ipt_length ip_contrack ip_contrack_ftp ip_contrack_irc ipt_contrack ipt_state ipt_helper iptable_nat ip_nat_ftp ip_nat_irc ipt_MARK"`

But the error acquires:

Quote: `Warning: Unknown iptable module: ipt_MARK, skipped
Bad parameter for --iptables: iptable_filter`

How to fix this?
