---

I've got Gentoo installed in a VPS. Apache is working in this install.

The difference between Gentoo and Debian/Suse: Apache is using the worker-mpm (threaded).  
Under Gentoo it's using prefork-mpm.

I'm going to compile Apache under Gentoo with the worker-mpm.

Debian VPS output of cat /proc/user\_beancounters:

Version: 2.5

uid	resource	held	maxheld	barrier	limit	failcnt	
101:	kmemsize	562242	934175	26624384	26624384		0
