Subject: High numiptent, any problems?
Posted by devonblzx on Fri, 31 Aug 2007 02:38:26 GMT

I notice the default install of APF uses approximately 820 on the numiptent limit. Your wiki says this is not a good idea to let each user use this much as it will slow down the network performance. Is this true? I noticed that disabling things like USE_DS and USE_RD and such and I have gotten to 222, but I would much rather have those on as it protects the server more from Spam and Hacker IP's.

Anyone notice any issues with allowing multiple users a high numiptent?
