sure it is doable! but it has nothing to do with openvz actually.
You just need to setup src-based routing rules in host system. e.g.

```
# /sbin/ip rule add from $IP table $TBL  
# /sbin/ip route add default dev eth0 via $GW table $TBL
```

where \$IP is ip address which should use non-default GW.
\$GW is gateway for this IP addr
\$TBL - any free table number, I use numbers from 6 to ...
every next non-std GW will require another table number

read `man ip` for routing rules details.
