sure it is doable! but it has nothing to do with openvz actually. You just need to setup src-based routing rules in host system. e.g.

# /sbin/ip rule add from \$IP table \$TBL
# /sbin/ip route add default dev eth0 via \$GW table \$TBL

where \$IP is ip address which should use non-default GW. \$GW is gateway for this IP addr \$TBL - any free table number, I use numbers from 6 to ... every next non-std GW will require another table number

read 'man ip' for routing rules details.
