i have a dedicated server with a couple vps servers in there. When trying to turn iptables off the server crashes. I did a chkconfig iptables off already but if i type service iptables off it will crash again. When it does crash, it gives a kernel panic error... any idea?

```
[root@myserver ~]# uname -a
```

```
Linux myserver 2.6.18-8.1.8.el5.028stab039.1 #1 SMP Mon Jul 23 18:02:32 MSD 2007 x86_64  
x86_64 x86_64 GNU/Linux
```
