pengooin wrote on Sat, 01 September 2007 12:12seems that rebooting the server solved these issues. But how should i solve these without rebooting ?

Failing quota off with 'Device or resource busy' error means that some file from VE private area was in use: might be some process running on HN opened it or just somebody had an ssh session opened with current dir in /vz/private/201/...

Unfortunately there is no general algorithm of finding a guilty process, but you can try check 'lsof <private area>', /proc/<pid>/cwd, /proc/<pid>/fd, /proc/<pid>/maps
