Hello,

> rebuild the kernel form vps or host ?  
VPS has no kernel. in host system.

> 1 how you buil the kernel please send me step by step

1. rpm -ihv vzkernel-XXX.src.rpm

2. cd /usr/src/redhat/SOURCES (or whatever directory you have for RPM builds)

3. edit all i686 config files, replace line:

# CONFIG\_VE\_SYSFS is not set

with line:

CONFIG\_VE\_SYSFS=y

4. rpmbuild -ba --target=i686 kernel-ovz.spec

WBR,  
Kirill
