
Subject: ***SOLVED*** APF on host node

I used to have APF on one of my OpenVZ nodes a while back and had no problems with it, but recently I have been trying to install APF on one of my newer nodes and it seems to cut off all access to my VPS's inside the node. I can still ping the host node but any IP that is run under a virtual server is unreachable.

Any ideas on why this is or how to get APF working on the host node?
