new to openvz so excuse my ignorance on this but when i do a "vzyum 101 update"....on this virtual server it goes great. but then i want to install firefox on the virtual server a then i do a "vzyum 101 install firefox" it seems to go well but when completed i can not ssh back into the virtual server. it says connection refused. i am not sure where to look to fix this. looked inside the .ssh directory but that did not help. have done this several times thinking maybe? but i get the same "connection refused"

jc
