got an new opteron running rhel64

Everything seems fine except trying to build the OS cache on centos 4.2

Creating cache for centos-4-i386-default OS template

rpmdb: Program version 4.2 doesn't match environment version

error: db4 error(22) from dbenv->open: Invalid argument

error: cannot open Packages index using db3 - Invalid argument (22)

error: cannot open Packages database in /vz/root/100001/var/lib/rpm

Traceback (most recent call last):

  idx = ts.dbMatch('provides', self.getConfigOption('distroverpkg'))
```

TypeError: rpmdb open failed

ERROR: yum failed with 1 exit code

[root@vps2 openvz]#

i did comment out the PYTHON path which i found in this forum, i then had python-celementtree-1.0.5-1.2.el4.rf.x86_64.rpm installed but it griped about couldn't find the cElementtree.so module, so i tried python-elementtree-1.2.6-6.2.el4.rf.x86_64.rpm and i get the above errors.

First time working with a 64 bit system, not sure if i'm doing something wrong or not.
