Hi , I get the following Known error on 028stab039 kernel
but http://wiki.openvz.org/Migration_fails#Problem_.232
states that this is fixed in 028stab035 or newer kernels
Of course if i disable udev in the VE checkpointing works ok.
But i would really like to use udev in the VE.

Live migrating VE

 Suspending VE

Setting up checkpoint...

 suspend...

Can not suspend VE: Device or resource busy

file on unsupported FS: magic 0bad1dea

Checkpointing failed

Error: Failed to suspend VE

Thanks

Alex
