Subject: [Lxc-devel] Q: Do systems using containers user more process ids?
Posted by ebiederm on Sun, 13 Aug 2006 16:43:07 GMT

When looking at the linux pid hash table it is clearly tuned
to a small number of processes < 4096. If there are more then
that it starts to degrade with a worst case of 1024 entries
on each hash chain when pid_max is pushed up to 4*1024*1024.

If more process ids are common then it may be the case that
we need to fix that data structure so it scales more gracefully.

Eric

Using Tomcat but need to do more? Need to support web services, security?
Get stuff done quickly with pre-integrated technology to make your job easier
Download IBM WebSphere Application Server v.1.0.1 based on Apache Geronimo
