Ladies and Gentlemen!

here is the first Linux-VServer version (testing)  
with support for the \*spaces (uts, ipc and vfs)  
introduced in 2.6.19 ...

<http://vserver.13thfloor.at/Experimental/patch-2.6.19-vs2.1.x-t1.diff>

it might not be as perfect as the kernel itself \*G\*  
but it does work fine here, and with recent tools  
most virtualization features work as expected

please if you do testing, report issues or comments  
to the Linux-VServer mailing list or to me directly  
(at least CC would be fine) and do not bother the  
nice kernel folks ...

enjoy,  
Herbert
