great for you, here some details:

- 2.6.19 was released 29th Nov 2006
- OpenVZ page shows 2.6.9-023, 2.6.16 and the 2.6.18 development
- Linux-VServer has followed the -rc series too, so that's nothing new
- I didn't manage to find an OpenVZ patch for 2.6.19 on your site

but probably all the changes from 2.6.19 have been backported to the stable 2.6.9 kernel several months ago :)

best,
Herbert
