This is a nice idea, but I'm working to get rid of 'struct class\_device'  
from the tree. Network devices have already been converted, the patch  
is in the -mm tree, I'm working on some firewire fixes before pushing it  
to Linus.

So, I think you want to do this work for 'struct device' too, as that is  
what will be the real user of this code.

thanks,
