
Subject: [PATCH] Merge sys_clone()/sys_unshare() nsproxy and namespace handling

Posted by [Badari Pulavarty](#) on Thu, 01 Mar 2007 18:40:46 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi,

sys_clone() and sys_unshare() both makes copies of nsproxy and its associated namespaces. But they have different code paths.

This patch merges all the nsproxy and its associated namespace copy/clone handling (as much as possible).

Posted on container list earlier for feedback.

Ran LTP and unshare tests fine.

Andrew, can you include it in -mm ?

Thanks,
Badari

Merge sys_clone/sys_unshare nsproxy and namespace copy handling.

- Create a new nsproxy and its associated namespaces and pass it back to caller to attach it to right process.
- Changed all copy_*_ns() routines to return a new copy of namespace instead of attaching it to task->nsproxy.
- Moved the CAP_SYS_ADMIN checks out of copy_*_ns() routines.
- Removed unnecessary !ns checks from copy_*_ns() and added BUG_ON() just incase.
- Get rid of all individual unshare_*_ns() routines and make use of copy_*_ns() instead.
