Subject: Re: openvpn and tap/bridging with a "dummy" network adapter?
Posted by dev on Thu, 23 Feb 2006 10:20:36 GMT

1. have you got dummy network device in VPS?
vps# ifconfig -a

Did you simply move it from host via vzctl set --netdev_add?

2. VPS have no rights to change MAC addresses by default.
This is a security limitation.

So you need to give CAP_NET_ADMIN capability to your VPS:
host# vzctl set VPSID --capability net_admin:on
