Subject: [RFC][PATCH 0/6] Allow unsharing pid namespace.

This patchset defines a struct pid_nr and uses this to allow processes to unshare their pid namespace.

struct pid_nr will hold [pid value, namespace] pair for each struct pid* in use. The pid value used will be different for each namespace the struct pid* is in use.

A list of pid_nrs will be added to struct pid and used by the kernel when using pid values(through pid_nr()).

[PATCH 1/6]:
Add struct pid_nr and associated helper functions.

[PATCH 2/6]:
Reimplement the pid_nr() function using struct pid_nr.
i.e pid_nr() should return the pid_t of a process
depending on the pid namespace of the caller.

[PATCH 3/6]:
Attach a list of struct pid_nrs to the struct pid.

[PATCH 4/6]:
Statically allocate/initialize a struct pid_nr for
swapper process.

[PATCH 5/6]:
Define helper functions used to unshare pid namespace.

[PATCH 6/6]:
Implement unsharing of pid namespace.
