I had a bit of trouble reviewing this one because I was laughing so hard at the attempted coding-style in that driver. Oh well.

I continue creeping into Christoph's camp - there's quite a bit of open-coded gunk which would go away if we were to teach this driver about kthread\_should\_stop() and kthread\_stop(), and the conversion looks awfully easy to do. It's a shame to stop here.

Oh well, I guess at least this is some forward progress.
