```

I think this should be:

```
static bool permit_umount(struct vfsmount *mnt, int flags)
{
    if ((mnt->mnt_uid != current->fsuid) && !capable(CAP_SETUID))
```

```
return false;
```

```
if ((flags & MNT_FORCE) && !capable(CAP_SYS_ADMIN))  
    return false;
```

```
return true;
```

```
}
```

I.e.

MNT_USER gone.

compare against fsuid.

Only require setuid for unmounts unless force is specified.

I suspect we can allow MNT_FORCE for non-privileged users
as well if we can trust the filesystem.
