Subject: [PATCH 8/28] [PREP 8/14] Make proc be able to have multiple super blocks

Posted by Pavel Emelianov on Fri, 15 Jun 2007 16:06:30 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

Each namespace must have its own proc super block where dentries and inodes representing the tasks live. Plus proc super block must hold the namespace it draws the pids from.

Making one proc mount with filtering looks very ugly for the following reasons. Two namespaces can have one numerical id refer to different tasks, e.g. 1 in init namespace refers to init, but 1 in sub namespace does not. This creates difficulties in proc. However having many proc trees solves this problem and prepares the ground for the proc virtualization.
