Subject: [PATCH 11/17] Pid-NS(V3) Enable cloning pid namespace

From: Sukadev Bhattiprolu <sukadev@us.ibm.com>

When clone() is invoked with CLONE_NEWPID, create a new pid namespace and then create a new struct pid for the new process. Allocate pid_t's for the new process in the new pid namespace and all ancestor pid namespaces. Make the newly cloned process the session and process group leader.

Since the active pid namespace is special and expected to be the first entry in pid->upid_list, preserve the order of pid namespaces.

Pid namespaces can be nested and the nesting depth is statically limited to MAX_NESTED_PID_NS (arbitrarily set to 4 at present).

The size of 'struct pid' is dependent on the the number of pid namespaces the process exists in, so we use multiple pid-caches'. Only one pid cache is created during system startup and this used by processes that exist only in init_pid_ns.

When a process clones its pid namespace, we create additional pid caches as necessary and use the pid cache to allocate 'struct pids' for that depth.

If the nesting level of pid namespace exceeds MAX_NESTED_PID_NS, we fail the clone() system call with an -EINVAL error.

TODO (partial list:)

- Identify clone flags that should not be specified with CLONE_NEWPID and return -EINVAL from copy_process(), if they are specified. (eg: CLONE_THREAD|CLONE_NEWPID ?)
- Add a privilege check for CLONE_NEWPID

Changelog:

2.6.22-rc4-mm2-pidns2:

- Place a compile-time limit on levels of pid namespace-nesting and use this limit to optimize 'struct pid' allocation.

2.6.22-rc4-mm2-pidns1:

- Optimize the 'struct pid' and 'pid->upid_list' memory allocation

for processes that can exist in pid namespaces upto 3 levels deep (i.e init_pid_ns plus two).

2.6.21-mm2-pidns3:

- 'struct upid' used to be called 'struct pid_nr' and a list of these were hanging off of 'struct pid'. So, we renamed 'struct pid_nr' and now hold them in a statically sized array in 'struct pid' since the number of 'struct upid's for a process is known at process-creation time

- [Badari Pulavarty] Free new_pid_ns if init_upid() fails

2.6.21-mm2:

- [Serge Hallyn] Terminate other processes in pid ns when reaper is exiting.

Signed-off-by: Sukadev Bhattiprolu <sukadev@us.ibm.com>
