OK. We have measured the nptl perf test for init namespace.  
Summary - flat model is very light, Suka's patches break the  
kernel performance event when CONFIG\_PID\_NS is off.

	perf, s		perf loss	
-----+		-----+		-----+
-----+		-----+		-----+

I do believe that Suka's hierarchical model is better than mine,  
but my point is: let's support the flat model as well.

Thanks,  
Pavel.
