
Subject: [PATCH 2.6.22-rc5 1/2] New kernel API for changing an ID of a SystemV IPC

Posted by [Pierre Peiffer](#) on Thu, 21 Jun 2007 14:48:33 GMT

[View Forum Message](#) <> [Reply to Message](#)

This patch provides three new API for changing the ID of an existing System V IPCs.

These APIs are:

```
long msg_mvid(struct ipc_namespace *ns, int id, int newid);
long sem_mvid(struct ipc_namespace *ns, int id, int newid);
long shm_mvid(struct ipc_namespace *ns, int id, int newid);
```

They return 0 or an error code in case of failure.

They may be useful for setting a specific ID for an IPC when preparing a restart operation.

To be successful, the following rules must be respected:

- the IPC exists (of course...)
- the new ID must satisfy the ID computation rule.
- the entry (in the kernel internal table of IPCs) corresponding to the new ID must be free.

Signed-off-by: Pierre Peiffer <pierre.peiffer@bull.net>
