Well ... if this is noise, it should be me apologizing, not you <grin>. I'm the one who asked.

- > Paul Menage's container patches provide a process aggregation mechanism,

- > other container features like resource isolation and checkpoint/restart.

So ... will you (those using the netns patches) be using Paul Menage's containers, or competing with them for the same ends, or what?

To repeat my original question, what is the relation between the work described on this thread (which some OLS discussions have decided to base on the netns patches) and Paul Menage's containers and my (now the community's) cpusets.

I won't rest till it's the best ... Programmer, Linux Scalability Paul Jackson <pj@sgi.com> 1.925.600.0401
