## Subject: cPanel vs. Quotas
Posted by LayerFour on Tue, 07 Mar 2006 13:35:16 GMT

Well, i've just tried installing cPanel on my OpenVZ Hostnode and it seems to of gone well apart from the Quotas, does anybody know how to sort out the Quota situation for a cPanel VPS, i'm totally clueless, just sat here playing with /etc/fstab and /etc/mtab and using the cPanel fixquotas script to no avail.

It just errors saying there is no quota support in the kernel and the limits within cPanel just don't work.
