Subject: Re: Memory Issue Inside Of Vps see all Memory from server host
Posted by kir on Wed, 08 Mar 2006 16:51:23 GMT

This is actually not a bug, but more of a "misfeature" -- /proc/meminfo is not yet virtualized.

VPS is still allowed to use as much memory as specified by its configuration (user beancounters parameters).

PS if you want to post some comments to the bug -- you'd better do it in bugzilla not here.
