
Subject: [RFC,PATCH] fix /sbin/init signal handling
Posted by [Oleg Nesterov](#) on Sun, 19 Aug 2007 15:08:22 GMT

(Not for inclusion yet, against 2.6.23-rc2, untested)

Currently, /sbin/init is protected from unhandled signals by the "current == child_reaper(current)" check in get_signal_to_deliver(). This is not enough, we have multiple problems:

- this doesn't work for multi-threaded inits, and we can't fix this by simply making this check group-wide.
- /sbin/init and kernel threads are not protected from handle_stop_signal(). Minor problem, but not good and allows to "steal" SIGCONT or change ->signal->flags.
- /sbin/init is not protected from __group_complete_signal(), sig_fatal() can set SIGNAL_GROUP_EXIT and block exec(), kill sub-threads, set ->group_stop_count, etc.

Also, with support for multiple pid namespaces, we need an ability to actually kill the sub-namespace's init from the parent namespace. In this case it is not possible (without painful and intrusive changes) to make the "should we honor this signal" decision on the receiver's side.

Hopefully this patch (adds 43 bytes to kernel/signal.o) can solve these problems.

Notes:

- Blocked signals are never ignored, so init still can receive a pending blocked signal after sigprocmask(SIG_UNBLOCK). Easy to fix, but probably we can ignore this issue.
- this patch allows us to simplify de_thread() playing games with pid_ns->child_reaper.

(Side note: the current behaviour of things like force_sig_info_fault() is not very good, init should not ignore these signals and go to the endless loop. Exit + panic is imho better, easy to change)

Oleg.
