Subject: Re: Changed gentoo-add_ip.sh to work with baselayout-vserver-1.11.14-r3 Posted by Jason Stubbs on Sat, 11 Mar 2006 03:38:10 GMT View Forum Message <> Reply to Message

Specifying something like routes_venet0=("default via 191.255.255.1 dev venet0") was never supported. It will break when iproute2 is installed and it will break with baselayout-1.12.*. The device name is given in the variable name. It's just a bug in baselayout-1.11's ifconfig support module that the device name isn't passed to the route command automatically.
